

Better Business Communications with LTE

LTE, also known as the ``Long Term Evolution`` project, encompasses the development of mobile data transfer systems over the years. Now, LTE becomes LIMITLESS TECHNOLOGY EQUIPMENT which has the capacity to give your business communications a life of its own.

NATIONWIDE NEW ZEALAND & INTERNATIONAL 2-WAY COVERAGE

LTE is a major step forward in mobile 2-way communications that breaks down the barriers of terrain and distance. Harnessing the power of established 2G, 3G and 4G networks internationally, LTE brings the connectivity of the everyday mobile phone and marries it with push-to-talk 2-way technology. This means you can communicate immediately, efficiently and easily with everyone, or groups and individuals, whether they're across the street, on the other side of the city, or the world!

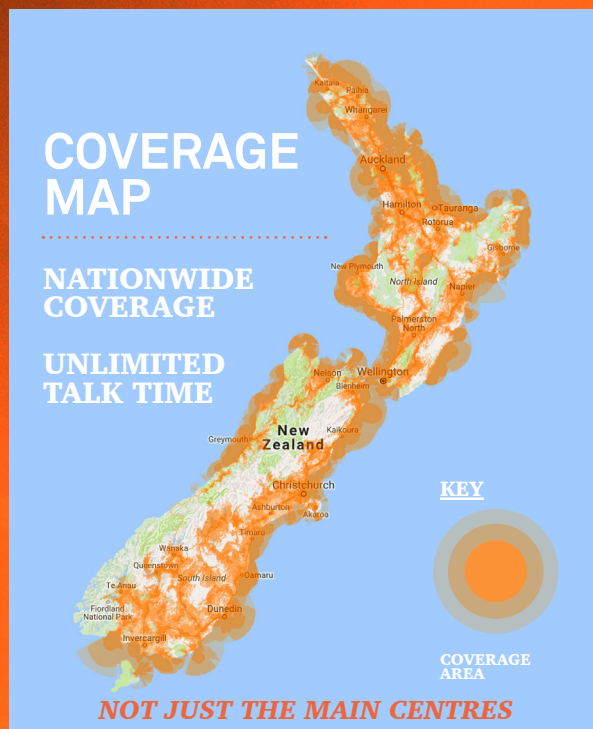

DECIDE WHO YOU'RE TALKING TO

LTE is the current state-of-the-art in mobile communications, and it's so versatile. Whereas old 2-way technology meant you were always talking to everyone, the LTE system allows you to define groups and individuals. This means you can use your LTE device to speak to only a certain group, just one person, or everyone all at once.

TOTALLY CUSTOM COMMUNICATIONS

LTE is set up specifically for YOUR business, with your staff structure, communication needs and business objectives in mind. YOU get to define who gets to hear what, AND you can change that setup anytime you like.

What Is LTE?

THE NEXT GENERATION TWO WAY RADIO

LTE, also known as the ``Long Term Evolution`` project, encompasses the development of mobile data transfer systems over the years. Now, LTE becomes LIMITLESS TECHNOLOGY EQUIPMENT which has the capacity to give your business communications a life of its own.

LIMITLESS APPLICATIONS

LTE can be configured specifically to your needs, utilising chat groups, private conversations and broadcast messages, all 'over-the-air' and at the touch of a button.

LIMITLESS COMMUNICATION

LTE tears down the borders imposed by regular 2-way radio communications. LTE offers NEW ZEALAND WIDE coverage for \$14.75 plus GST, unlimited talk time, without borders, repeaters or extra charges.

LIMITLESS OPTIONS

LTE offers many options of devices for handheld mobile/vehicle and computer dispatch applications, meaning the whole team can stay connected wherever they are, on foot, in the office or out on the road.

How Does LTE Work?

Limitless Technology Equipment combines the well established 2G, 3G and 4G mobile phone network with ``push-to-talk`` convenience. Now, your 2-way radio communications can go WAY beyond your site, premises and even your town, city, or the whole country at no additional cost.

LTE COMMUNICATIONS PROVIDES EASY NATIONWIDE 2-WAY RADIO COMMS
