

Digital 2.4GHz Wireless Tour Guide System

The new **Chiayo Digital Tour Guide System** provides a feature-packed, high performance two-way communication system for guided tours, language learning and interactive group activities.

This stylish, flexible professional Tour Guide System runs on the 2.4GHz digital frequency and, therefore, provides licence-free wireless communication.

Fully-scalable, the digital Tour Guide System has no limit to the number of Receivers which can be used on a single system, allowing large scale systems and the ability to 'start small and add later' if audience numbers increase.

Simple to use, this is a two-way wireless communication system, supporting 'talk-back' from the audience Receiver devices as well as from the Tour Guide main Transmitter Unit - ideal for interactive Q&A and 'listen and repeat' activities in language learning, for example.

The DCT-511 Transmitter device features a 'multi-play' facility - simultaneously broadcasting voice and line level signals (for instance from an MP3 player or smart phone) to allow for the addition of background music sound effects or pre-recorded speech, for example, to inject real atmosphere into tours and lessons!

Main Features:

- Ideal for guided tours, language learning and interactive activities
- Feature-packed Wireless Tour Guide System
- Compact, lightweight & stylish Receivers/Transmitters
- Unlimited number of Receivers can be added to the system
- Lithium batteries provide up to 16 hours of operation of Receivers (10 hours for Transmitter)
- Multi-play facility allows simultaneous broadcast of voice and line level signal
- Receiver features 'TalkBack' facility (ask questions/interact with Guide/Presenter)
- Operation range up to 50 metres
- Out-of-range tone broadcast to Transmitters
- Stereo transmission
- Volume and Mute Control
- 20 unit Charging Base and optional bag available

** Any stereo headset with a 3.5mm audio jack connection can be used with the receivers - and we also offer high fidelity "noise cancelling" headphones for noisy environments.

- **HP-1000**
- Noise Cancelling Stereo Headphones

System Components:

- **DCT511:**
- Beltpack Transmitter to be used with the EHP90 Noise-cancelling Stereo Ear Buds and Microphone

- **DCR511:**
- Beltpack Receiver to be used with the EC18 Single Earset Microphone

- **EHP-110:**
- Noise-cancelling Stereo Ear Buds and Microphone (used with the DCT-511)

- **EC18:**
- Single Earset (used with the DCR-511)

- **EC16:**
- Dual Earbuds (used with the DCR-511)

- **HC520:**
- 20 device Charger for the DCR511/DCT511

- **SB-520:**
- Soft Carry Bag for charger and accessories

'Talk-Back' facility allows audience to speak to Tour Guide or Presenter
